(a) Gain of every MS1 scan (SZ22_12C injection)
scan gain (median 1)
RT (min)
robust sd of the log gains 0.024
(638 scans rest on ≥ 3 seed traces;
1 where no seed trace covers the scan)
HZV029 worked example: gains all 1,
no jitter beyond its noise
(b) One strong ion (m/z 118.0864)
raw trace
divided by the scan gains
intensity
RT (min)
(c) The factor removed from that trace
the same factor is removed from every ion
of the scan: it is the scan's, not the ion's
gain applied to each scan
RT (min)
